TAKE YOUR VIEWING EXPERIENCE TO A WHOLE NEW LEVEL

See more, hear more, feel more with the 2010 Home Entertainment range from LG.

We have been working with new technologies to bring you the very best in sound and vision. Our televisions offer vibrant clarity and seamless connectivity with your electronic devices.

We have introduced these technologies throughout the range of our 3D, LED, LCD and Plasma televisions. A number of our TVs also have built in Freeview HD which means you can now watch some of your favourite programmes in stunning high definition subscription free.

They adapt to the way you want to use them, with modes that optimise performance for films, gaming, and sport. And with an exciting year of sporting events ahead, we'll take you closer to the action than ever before.

These are some of the most energy-friendly televisions on the market. Many of them have been recommended by the Energy Saving Trust, so do your bit for the environment and get the best Home Entertainment experience without compromise.

But we offer much more than great televisions . . .

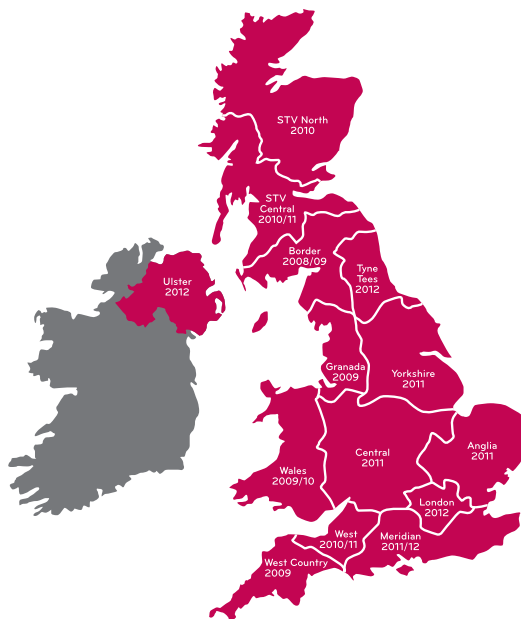

We bring you a new range of Blu-ray including the 3D Blu-ray player and a variety of Blu-ray Home Theatre systems.

We also know it's important to have something that looks as good as it performs, so we've designed our products with acute attention to detail. They're sleek enough to add to stylish spaces, yet modest enough to suit your homes.

DIGITAL TV – By 2012, all areas of the UK will receive TV in digital, as opposed to analogue. Digital TV provides better picture quality and a greater choice of TV and radio channels. It also offers new features such as on-screen programme guides, interactivity, audio description and subtitling for people with visual and audio impairments

The map below shows the dates the switchover will take place in your regions.

FREEVIEW HD – Get Ready to watch High Definition TV for free with built in freeview HD bringing you the best of BBC, ITV and C4 in glorious high definition with no monthly fee or contract. Freeview HD provides up to 5 times the picture quality of standard definition freeview taking you closer to the action.

*Check you can get Freeview HD where you live – just visit www.freeview.co.uk or text your postcode and house number or house name to 80560

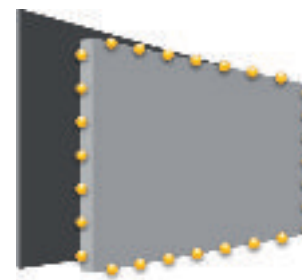

HD – High-definition television, (HDTV) is a new standard of TV with better-quality picture and sound. HDTV brings you closer to the action, offering more colours and a higher resolution picture similar to what you'd see at a cinema.

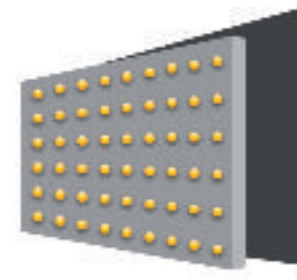

LED – LG LED TVs produce a sharper, more detailed picture with a superior contrast as well as an ultra slim design compared to LCD TVs. LED TVs have tiny lights either around the edge of the TV (known as Edge LED) or directly behind the TV (known as Full LED).

EDGE LED

FULL LED

LED TVs are ultra slim and can be hung like a picture without disturbing the aesthetics of your interior décor. They are also more energy efficient so you will save 40% of power consumption compared to LCD TVs – LG energy efficient TVs are certified by the Energy Saving Trust

NETCAST – brings the best of the internet directly to your TV, without the need for a computer. You can enjoy free YouTube, weather forecasts as well as online photo sharing from the comfort of your living room sofa. You can access this service by connecting LG NetCast TVs to your home network either via the built-in Ethernet port or using an optional WiFi USB dongle.

DLNA – (Digital Living Network Alliance) Create a wireless home network to talk to your PC, digital camera, mobile phone and even Blu-ray player. This seamless connection to multiple WiFi-enabled devices anywhere in your home lets you to watch online content on the big screen without any unsightly wires.

WHAT IS 3D?

3D technology is filmed using two separate images with two standard definition cameras. They act like a pair of eyes, focusing on the left and right angle of the image. The images from both cameras are edited and converted into a three dimensional image. LG offers two types of 3D technology:

1. PASSIVE

This is similar to what you would experience in the cinema whilst watching a 3D movie. They use polarised glasses to display a different image to each eye by only letting in the correct image intended for the left and right eye.

2. ACTIVE

Active TV sets use special LCD shutter glasses which are activated by the emitter built inside the TV. The glasses house much of the 3D technology in the glasses themselves and therefore make them significantly more expensive.

WHAT CAN I VIEW IN 3D?

Currently there is a limited amount of 3D content available but that is all set to change. Sky will launch a dedicated 3D channel in autumn 2010 to bring more fantastic 3D viewing to enhance your home entertainment viewing experience.

Committed to making 3D accessible to everyone, LG is working with sky to bring live sporting events in 3D to hundreds of thousands of people every week. This year over 1500 pubs have been kitted out with LG 3D TVs.

Visit 3d.sky.com/pubfinder to find the nearest pub. 3D Video Games, Blu-ray and live 3D broadcasts from Sky will be sure to give a wide variety of 3D entertainment which can be enjoyed in your home.

WHAT IS THE FUTURE OF 3D?

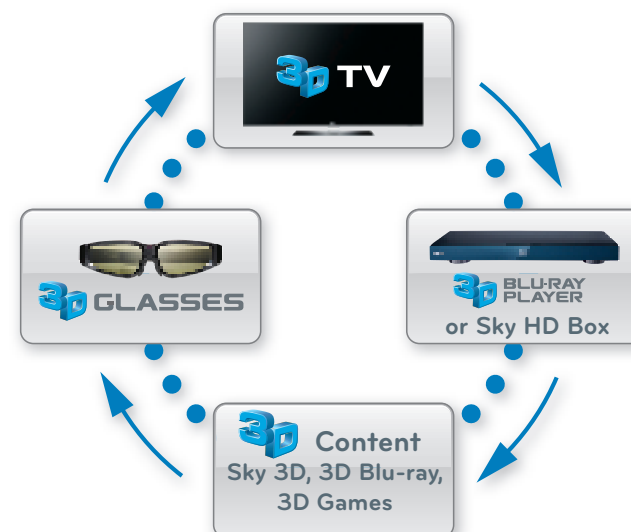

3D technology has actually been around a long time but has recently come to life as the film; gaming and broadcast industry has started to create amazing blockbuster 3D hits.

When Avatar 3D launched in autumn 2009 cinemas throughout the world were selling out as the box office hit record numbers. Sky have also been broadcasting live 3D sports to allow you to experience the stunning impact of 3D TV.

3D is definitely here to stay and it will roll across new exciting products to deliver an enhanced home entertainment experience.

HOW CAN I VIEW 3D?

In order to view 3D you will need:

DO I HAVE TO WEAR 3D GLASSES TO WATCH 3D?

YOU WILL NEED 3D GLASSES TO VIEW 3D.

A SCREEN VIEWED WITHOUT 3D GLASSES WHEN SHOWING 3D FOOTAGE WILL LOOK BLURRY TO THE NAKED EYE

GLASSES FOR ACTIVE TV SETS

The active glasses need to be charged. This can be done by taking the wire that comes inside the glasses box and connecting the USB input end to the TV and then the other end connect to the glasses. When the green light flashes the glasses are fully charged. To turn on the glasses press the on button and wait for the glasses to synchronize with the transmitters built inside the TV set which provides you with up to 40 hours of uninterrupted viewing.

GLASSES FOR PASSIVE TV SETS

Glasses for the passive TV sets are simple, light and easy to use. They do not require to be charged and can just be put on. One important point to consider is the cost of replacing broken or lost 3D glasses. Active glasses will cost more than passive glasses due to the additional technology they use.

GET READY FOR 3D WITH LG

3D TV takes you closer to the action providing a completely immersive viewing experience as soon as you put on your 3D glasses. You can convert your living room into a sports stadium or movie theatre with content from 3D Blu-ray players, 3D video games and future services from Sky.

LX9900 AVAILABLE IN 47"/55"

The LG Full LED Infinia LX9900 series is a whole new type of TV offering the ultimate in home entertainment with sublime picture quality, ultra slim single layer Infinia design and more eco friendly features.

You'll also have access to your favourite internet content such as YouTube as well as being 3D Ready – the LX9 Infinia TV series from LG will take your home entertainment experience to a whole new level.
